SUMMARY

Full-stack Software Engineer with strong experience building scalable, maintainable backend services and user-centric applications using **C#, .NET, SQL Server, AWS, React, and TypeScript**. Proven ability to own features end-to-end, optimize data-intensive systems, and collaborate across engineering, product, and research teams. Recognized for leadership, technical execution, and mentorship.

EXPERIENCE

CoStar Group

Richmond, VA

Software Engineer I

September 2024 - Present

- Designed and implemented database schemas and **SQL** logic, including tables, views, stored procedures, audit mechanisms, and triggers to ensure data integrity and traceability.
- Implemented backend balancing and assignment logic by delivering worker services, balance algorithms, and frontend-controlled manual workflows.
- Built **event-driven** and messaging workflows using **AWS** (EventBridge, SQS, SNS) and **Kafka** to automate and scale researcher task generation.
- Owned features end-to-end across multiple repositories, leading frontend development while delivering backend services, APIs, and database changes.
- Led **frontend-focused** delivery for two capstone projects and an AI web scrape project, coordinating agile execution, mentoring contributors, and communicating progress through regular stakeholder demos.

Associate Software Engineer

July 2023- September 2024

- Built the initial **React + TypeScript** frontend for new initiative, developing **reusable UI components** with a focus on **scalability, maintainability, and data-driven** workflows.
- Implemented complex, multi-step modal flows for various actions and operations, enabling **rapid expansion** across departments.
- Contributed to API routes and database logic, collaborating with fellow engineers to support evolving business requirements and ensure reliable frontend-backend integration.

UNC Department of Computer Science

Chapel Hill, NC

Undergraduate Teaching Assistant

August 2022- May 2023

- Led instruction for Web Development coursework, teaching technical concepts, grading assignments, and hosting office hours for 120+ students.

Juni Learning

Remote

Instructor

November 2021- May 2023

- Delivered advanced computer science lessons covering topics such as data structures and applied programming, adapting content to individual student needs and goals.

Bell Partners

Raleigh, NC

IT Intern

June 2022- August 2022

- Created dashboards and applications in **Power BI** to visualize operational and financial data for stakeholders.
- Used **SQL and Excel** for data validation, ensuring accuracy for reporting and analysis.

TECHNICAL SKILLS

Languages: C#, TypeScript, JavaScript, SQL, Python, Java

Technologies: .NET, React, Web API, SQL Server, Kafka, AWS, Node.js

Tools & Platforms: Git, Datadog (APM, logging, dashboards), Azure, TFS, Agile Development, OOP

CERTIFICATIONS

AWS Certified Cloud Practitioner (CLF-C02)

November 2025

EDUCATION

University of North Carolina at Chapel Hill

August 2020 - May 2023

Major: Computer Science, **Minor:** Data Science, **Cumulative GPA:** 3.8/4.0
