SUMMARY

Full-stack Software Engineer with 3+ years building scalable distributed systems and user-facing applications using C#, .NET, SQL Server, AWS, React, and TypeScript. Skilled at owning features end-to-end, leading cross-functional initiatives, and translating business requirements into reliable technical solutions. Proven track record of agile delivery, stakeholder communication, mentorship, and technical execution.

EXPERIENCE

CoStar Group

Richmond, VA

Software Engineer II

March 2026 – Present

- Architected event-driven microservices that process real-time data changes and orchestrate downstream actions across distributed services, enabling scalable, decoupled cross-team workflows
- Defined system design patterns, architectural standards, and technical roadmaps adopted across multiple teams, streamlining feature delivery and reducing cross-team integration overhead
- Partnered with product managers and stakeholders to scope initiatives, gather requirements, and drive delivery from planning through release
- Mentored junior engineers and new hires through code reviews, pair programming, and architecture deep dives, accelerating onboarding and raising team-wide code quality

Software Engineer I

September 2024 – February 2026

- Designed and implemented relational database schemas, stored procedures, views, audit logging, and triggers in SQL Server, ensuring data integrity, traceability, and compliance across high-volume systems
- Delivered backend balancing and assignment logic through .NET worker services, balance algorithms, and frontend-controlled manual workflows, supporting flexible and extensible operational requirements
- Engineered event-driven workflows on Kafka and AWS (EventBridge, SQS, SNS) that automated critical business processes, eliminating manual effort and improving operational efficiency
- Led multiple cross-functional projects end-to-end driving agile sprint execution, managing stakeholder communication, mentoring contributors, and delivering progress demos on schedule

Associate Software Engineer

July 2023 – September 2024

- Built the initial React and TypeScript frontend for a new internal platform, creating a library of reusable, scalable, and accessible UI components
- Implemented complex multi-step modal workflows and state management to support flexible, extensible user operations
- Collaborated with backend engineers on RESTful API design and SQL database logic, ensuring reliable system integration and supporting rapidly evolving business needs

Juni Learning

Remote

Computer Science Instructor

November 2021 – May 2023

- Delivered tailored advanced computer science curriculum covering data structures, algorithms, and applied programming, adapting lesson plans and pacing to individual student goals
- Tracked student progress and managed weekly schedules, balancing instructional delivery with proactive parent and stakeholder communication

Bell Partners

Raleigh, NC

IT Intern

June 2022 – August 2022

- Built interactive dashboards and reporting applications in Power BI to visualize operational and financial KPIs for executive stakeholders
- Performed data validation using SQL and Excel, ensuring accuracy and consistency for downstream reporting and business analysis

TECHNICAL SKILLS

Languages: C#, TypeScript, JavaScript, SQL, Python, Java

Frameworks & Libraries: .NET, React, Web API, REST APIs, Node.js

Cloud & Data: AWS (EventBridge, SQS, SNS, Lambda), Azure, Kafka, SQL Server

Tools & Methodologies: Git, Datadog, TFS, Agile/Scrum

CERTIFICATIONS

AWS Certified Cloud Practitioner (CLF-C02)

November 2025

EDUCATION

University of North Carolina at Chapel Hill

Major: Computer Science **Minor:** Data Science **Cumulative GPA:** 3.8 / 4.0
